

Catalina 250

the Catalina 250

First introduced in 1994, the Catalina 250 has already become what many consider a modern classic. This proper, safe and affordable pocket cruiser was designed for the growing sailing family. A cockpit big enough for the whole crew, with comfortable seating and deep coamings, so you can sail, dine and move about in a safe, secure environment.

Wide, uncluttered coamings are highlighted with two observation seats. The cockpit is made even more functional with two storage lockers and separate fuel storage locker. Getting on and off the boat is that much easier with the open transom and standard stainless swim ladder.

Below you'll find not only an enclosed head, with sink and vanity, but double berths fore and aft. The 250 galley has sink, stove, fresh water system, and a removable ice chest, standard.

Normally only found on larger boats, is the convenience of a standard 12 volt electrical system with control panel. The long list of a standard equipment even includes a standard pop-top enclosure with windows to increase the already ample headroom.

Sailing enjoyment is further enhanced by the standard roller furling headsail, and fully battened main, with Jiffy reefing.

You have your choice of water ballast centerboard model, or wing keel, lead ballast model. Both are trailerable, and come with outboard mounting bracket. A Yanmar inboard engine is now available, for those who prefer an inboard with sail drive system.

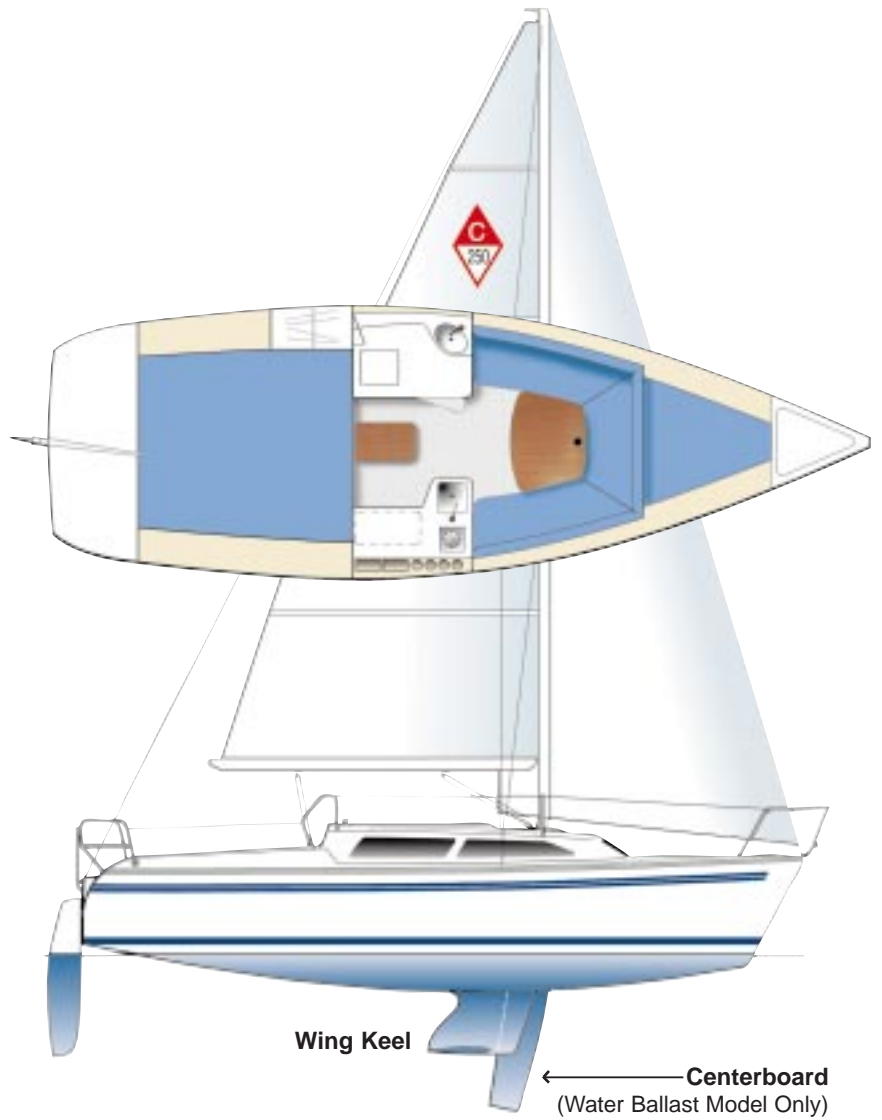

All of our boats are designed by sailors, who are very aware of the little details that make life aboard more enjoyable for all involved. Before you purchase your first Catalina, be aware that in all probability, there will be several more, of increasing size, in your future. For nearly 30 years, owners of multiple Catalinas have averaged four of our yachts apiece quite remarkable, given the variety of boats on the market and the experience and knowledge of the cruising sailboat buyer. The beginning of a beautiful relationship starts at your Catalina dealer.

Bring the family.

Not content merely to provide a pivoting mast step, we have taken into account the entire mast raising procedure. Catalina trailers are equipped with a telescoping mast on the tongue of the trailer. Combined with the matched winch, raising and lowering the mast has become a safe one person operation.
